Contents

Acknowledgement **i**

Abstract **ii**

Publication List **vi**

1 Introduction **1**
1.1 Chirality in Magnets 1
1.2 Chiral Soliton Lattice 2
1.2.1 Experimental Studies 3
1.2.2 Theoretical Studies 8
1.3 Purpose of This Thesis 9
1.4 Organization of This Thesis 10

2 Model **11**
2.1 Modeling of Monoaxial Chiral Magnets 11
2.2 Extended Kondo Lattice Model 13

3 Method **16**
3.1 Variational Method at Zero Temperature 16
3.1.1 Variational Spin Configurations 16
3.1.2 Calculation at Zero Field 19
3.1.3 Calculation in an Applied Magnetic Field 20
3.1.4 Calculation for the Spin-only Model 21
3.2 Quantum Monte Carlo Method at Finite Temperature 22
3.2.1 Partition Function 22
3.2.2 Monte Carlo Algorithm 23

4 Variational Results at Zero Temperature **24**
4.1 Chiral Helimagnetic State at Zero Field 24
4.2 Chiral Soliton Lattice in a Magnetic Field 26
4.2.1 Magnetic Field Dependence 26
4.2.2 Electron Filling Dependence 29
4.3 Electronic State in Chiral Magnetic States 29

4.3.1 Gap Opening in Chiral Soliton Lattice 29
4.3.2 Lock-in of the Period of Chiral Soliton Lattices 32
4.3.3 Spontaneous Formation of a Chiral Soliton Lattice 32
4.4 Comparison with Experiments 34

5 Monte Carlo Results at Finite Temperature **36**
5.1 Details of Simulation 36
5.2 Formation of a Chiral Soliton Lattice 37
5.3 Magnetoresistance in the Chiral Soliton Lattice 39
5.4 Temperature Dependence 42
5.5 Comparison to Experiments 44

6 Summary **45**
