Abstract	ii
Publication List	vii
Introduction	2
I Localized spin systems	7
1 Introduction	8
1.1 State of matter in spin systems	9
1.1.1 Quantum ordered phases	10
1.1.2 Quantum disordered phases	12
1.2 Higher-spin systems	17
1.2.1 Magnetic multipoles	17
1.2.2 $S = 1$ quantum magnets	18
1.2.3 $S = 3/2$ quantum magnets	20
1.3 Purpose of Part I	23
1.4 Organization of Part I	24
2 Competing phases in the $S = 3/2$ bilinear-biquadratic-bicubic model	25
2.1 Multipole operators	25
2.1.1 Quadrupole	26
2.1.2 Octupole	27
2.1.3 Spin coherent state	30
2.2 Model	32
2.2.1 Hamiltonian	32
2.2.2 Special parameter points for bilinear multipolar interactions	33

2.2.3	High symmetric points	35
2.2.4	Previous studies	36
2.3	Methods	40
2.3.1	Semi-classical: $SU(N)$ coherent state	40
2.3.2	Energy minimization by a gradient descent method	41
2.3.3	Lanczos algorithm	44
2.4	Square lattice	45
2.4.1	Semi-classical results	45
2.4.2	Exact diagonalization results	48
2.4.3	Discussion	53
2.5	Triangular lattice	54
2.5.1	Semi-classical results	54
2.5.2	Exact diagonalization results	57
2.5.3	Discussion	61
2.6	Summary and perspectives of this chapter	62
3	Competing phases in the $S = 3/2$ Kitaev-AKLT model	64
3.1	Model	65
3.2	Method	65
3.2.1	Three complementary approaches for the ground-state analysis	66
3.2.2	Generalized spin-wave theory	67
3.3	Ground-state phase diagrams	69
3.4	Stability of ordered phases	71
3.5	Spin structures of noncoplanar orders	72
3.6	Potential quantum disordered state	77
3.7	Effect of perturbative anisotropy	79
3.8	Discussion	81
3.9	Summary and perspectives of this chapter	82
II	Itinerant electron systems	83
1	Introduction	84
1.1	Topological phases in electron systems	85
1.1.1	Quantum Hall effect	86
1.1.2	Chern insulators and Berry curvature	87
1.1.3	Haldane model	89
1.2	Disorder effects on topological phases	91
1.2.1	Robustness and topological transitions	91
1.2.2	Selective random disorder	94
1.3	Purpose of Part II	96
1.4	Organization of Part II	96

2	Model	98
2.1	Bishamon-kikko lattice	98
2.2	Bishamon-kikko–honeycomb lattice	102
2.3	Haldane model on the honeycomb lattice with selective random defects	102
3	Method	104
3.1	Spectral properties	104
3.2	Topological properties	105
3.2.1	Momentum space formulation	106
3.2.2	Real space formulation	107
3.2.3	Calculation conditions	111
4	Topological phase diagrams of the Haldane model on the Bishamon- kikko and Bishamon-kikko–honeycomb lattices	113
4.1	Bishamon-kikko lattice	113
4.2	Bishamon-kikko–honeycomb lattice	116
4.3	Summary and perspectives of this chapter	119
5	Evolution of topological phases via selective random defects	120
5.1	Smooth connection	120
5.2	Topological transition induced by selective random defects	123
5.3	Effective model on the BKH lattice	126
5.4	Summary and perspectives of this chapter	129
	Conclusion	132
	Bibliography	134
