Acknowledgement	i
Abstract	ii
Publication List	vi
1 Introduction	1
1.1 Topological solitons in magnets	2
1.1.1 Chiral soliton	2
1.1.2 Skyrmion	2
1.1.3 Hopfion	5
1.2 Topological spin superstructures	9
1.2.1 Chiral soliton lattice	9
1.2.2 Skyrmion crystal	9
1.2.3 Hopfion crystal	12
1.3 Non-equilibrium dynamics	13
1.3.1 Skyrmion dynamics	13
1.3.2 Hopfion dynamics	16
1.4 Purpose of this thesis	17
1.5 Organization of this thesis	19
2 Model and Method	21
2.1 Model Hamiltonian	21
2.2 Energy optimization based on gradient descent	24
2.3 Landau-Lifshitz-Gilbert equation	25
2.4 Computation of topological invariants	26
3 Effective interactions between hopfions	29
3.1 Hopfion ansatz	30
3.2 Horizontal arrangement	31
3.3 Vertical arrangement	33

3.4	Instability of the hopfion chain	35
3.5	Summary and perspectives	38
4	Three-dimensional topological superstructure of hopfions	40
4.1	Effect of easy-plane anisotropy	41
4.2	Three-dimensional hopfion superstructure	42
4.2.1	Four hopfion chains with $H = +1$	43
4.2.2	Eight hopfion chains with $H = +1$ and $H = -1$	44
4.2.3	Spin flipping for hopfion chains with $H = -1$	44
4.3	Magnetic and topological properties of the hopfion super- structure	46
4.3.1	Distributions of topological invariants	47
4.3.2	Spin structure factor	49
4.4	Metastability of the hopfion superstructure	50
4.5	Summary and perspectives	53
5	Non-equilibrium dynamics of hopfions driven by spin-orbit torque	55
5.1	Preliminaries	56
5.2	SOT-driven dynamics of hopfions with $H = 1$	58
5.2.1	Helicity dependence	58
5.2.2	Steady-state phase diagram	61
5.3	SOT-driven split of hopfions with higher Hopf numbers . . .	61
5.3.1	Case with $H = 2$	62
5.3.2	Case with $H = 3$	70
5.3.3	Case with $H = 4$	70
5.4	Hierarchy in the SOT-driven split of hopfions	73
5.5	Dynamics driven by time-varying SOT	75
5.5.1	Sinusoidal SOT	75
5.5.2	Gaussian-pulse SOT	77
5.6	Summary and perspectives	78
6	Conclusion	82
	Bibliography	85
