Acknowledgement	i
Abstract	iii
1 Introduction	1
1.1 Quantum spin liquid	1
1.2 Kitaev model	3
1.3 Finite-temperature study of the Kitaev model	6
1.4 Experimental relevance of the Kitaev model	9
1.5 Purpose of this thesis	12
1.6 Organization of this thesis	13
2 Numerical methods for the pure Kitaev models	22
2.1 Majorana fermion representation	22
2.2 Quantum Monte Carlo method	24
2.3 Green-function-based kernel polynomial method	25
2.3.1 Local update by Green's functions	25
2.3.2 Kernel polynomial expansion of Green's functions	27
2.3.3 Benchmark	28
2.4 Replica exchange and Feedback optimization	29
2.5 Variational calculation for the ground state	32
2.6 Majorana band structures	33
3 Results for the hyperoctagon lattice	36
3.1 Hyperoctagon lattice structure	36
3.2 Kitaev model on the hyperoctagon lattice	37
3.3 Conditions and benchmark of numerical simulation	40
3.4 Thermal fractionalization	40

3.4.1	Specific heat and entropy	40
3.4.2	Spin correlations	42
3.4.3	Thermal average of the $\mathbb{Z}_2$ fluxes	43
3.5	Finite-temperature phase transition	43
3.5.1	Specific heat	43
3.5.2	Thermal fluctuations of the $\mathbb{Z}_2$ fluxes	45
3.5.3	Wilson loop	46
3.5.4	Critical temperature	46
3.6	Toric-code limit	46
3.7	Origin of the phase transition	49
3.8	Comparison of the critical temperatures	49
3.9	Summary	50
4	Results for the hypernonagon lattice	54
4.1	Hypernonagon lattice structure	54
4.2	Kitaev model on the hypernonagon lattice	57
4.3	Conditions and benchmark of numerical simulation	59
4.4	Thermal fractionalization	61
4.5	Finite-temperature phase transition	61
4.5.1	Internal energy and specific heat	61
4.5.2	Nature of the phase transition	63
4.5.3	Ordering of the $\mathbb{Z}_2$ fluxes	63
4.5.4	Transition temperature and flux gap	65
4.6	Ground-state phase diagram	67
4.6.1	Configurations of the $\mathbb{Z}_2$ fluxes	67
4.6.2	Gapped/gapless boundary in the Majorana spectrum	67
4.7	Summary	68
5	QMC simulation on asymptotic Lefschetz thimbles	73
5.1	Hubbard-Stratonovich transformation	73
5.2	Popov-Fedotov transformation	74
5.3	Suzuki-Trotter decomposition	75
5.4	Partition function	76
5.5	Determinant quantum Monte Carlo method	78
5.5.1	Markov chain sampling	78

CONTENTS

5.5.2 Benchmark	79
5.6 Numerical simulations on asymptotic Lefschetz thimbles	79
5.6.1 Lefschetz thimbles	79
5.6.2 Asymptotic Lefschetz thimbles	82
5.6.3 Quantum Monte Carlo method on asymptotic Lefschetz thimbles	84
5.6.4 Visualization of the asymptotic Lefschetz thimbles	85
5.6.5 Benchmark	86
5.7 Results for the Kitaev model in a magnetic field	89
5.8 Summary	92
6 Summary	100
A Majorana band structures on the hypernonagon lattice	103
A.1 Projective symmetry group	103
A.2 SI phase	104
A.3 AF phase	105
A.4 AFII phase	108
List of publications	112
